Spring 2013 Midterm Exam Review

When / Where

Wednesday, 13 March 2013, 9:30-10:40 CDT

225 Tureaud (Here)

Conditions

Closed Book, Closed Notes

Bring one sheet of notes (both sides), $216 \text{ mm} \times 280 \text{ mm}$.

No use of communication devices.

Format

Several problems, short-answer questions.

Resources

Solved tests and homework: http://www.ece.lsu.edu/ee4720/prev.html

Statically Scheduled MIPS Study Guide:...

... http://www.ece.lsu.edu/ee4720/guides/ssched.pdf

Study Recommendations

Study this semester's homework assignments. Similar problems may appear on the exam.

<u>Solve</u> Old Problems—memorizing solutions is not the same as solving.

Following and understanding solutions is not the same as solving.

Use the solutions for **brief hints** and **to check** your own solutions.

MIPS Programming and Instruction Use

Should be able to write MIPS programs.

Should be able to easily understand MIPS programs.

Should be able to use other ISAs' instructions in examples.

Not required to memorize instruction names, except for common MIPS instructions.

MIPS Implementation

Implementation Diagrams and Pipeline Execution Diagrams

They are a *team*, so study them together.

ISA Families

MIPS v. SPARC

Topics

ISA v. Implementation.

See Lecture Slides 1-http://www.ece.lsu.edu/ee4720/2013/lsli01.pdf

Why separating ISA from implementation is important.

Why it's hard to design an ISA without bias towards first implementation.

MIPS ISA

See MIPS Overview—http://www.ece.lsu.edu/ee4720/2013/lmips.html

Write and read programs.

Understand how instructions are coded.

mr-6

Statically Scheduled MIPS Implementations

See Lecture Slides 6—http://www.ece.lsu.edu/ee4720/2013/lsli06.pdf and Statically Scheduled Study Guide—http://www.ece.lsu.edu/ee4720/guides/ssched.pdf

Unpipelined Implementation

Understand relationship between insn format and connections to register file, etc.

Pipelined Implementation Versions

Basic (no bypassing).

ALU bypassing, branch in ID.

Many variations covered in class and in assignments.

Terminology

Dependency Definitions

Hazard Definitions

MIPS Implementation Skills

For a Given Pipelined ImplementationShow pipeline execution diagrams.Show register contents at any cycle.Design control logic.Determine CPI.

Add bypass paths.

Add functional units.

ISA Families

ISA Families: RISC, CISC, VLIW

See ISA Families Overview—http://www.ece.lsu.edu/ee4720/2013/lrisc.html

Key distinguishing features and their rationale.

RISC: Goal: Easy pipelining, simple (relatively) implementation.

Fixed-length instructions, balanced work, aligned memory access.

CISC: Goal: Powerful instructions, compact code size.

Flexible operand types, multiple-activity instructions.

VLIW: Goal: Easy superscalar implementation.

Bundled instructions, dependence information.

RISC to RISC Differences: MIPS v. SPARC

See ISA Families Overview—http://www.ece.lsu.edu/ee4720/2013/lrisc.html

Opcode fields (and their extensions).

Immediate operands, immediate sizes.

Integer branches.

CISC ISA Features

Goal: Powerful Instructions

Powerful: Many memory addressing modes.

Powerful: Many immediate sizes.

Powerful: Few limits on where addressing modes can be used.

VAX ISA

Available addressing modes.

How they are encoded. (No need to remember exact operand specifiers.)

Compilers and Optimization

See Optimization Lecture Notes-http://www.ece.lsu.edu/ee4720/2013/lopt.html

Steps in building and compiling.

Basic optimization techniques, compiler optimization switches.

Profiling.

Compiler ISA and implementation switches.

How programmer typically uses compiler switches (options).

Benchmarks

See middle of Lecture Slides 2—http://www.ece.lsu.edu/ee4720/2013/lsli02.pdf, SPECcpu description—http://www.spec.org/benchmarks.html, and the SPECcpu run and reporting rules—http://www.spec.org/cpu2006/Docs/runrules.html

Benchmark types: kernel, synthetic, real progs.

SPECcpu Benchmark Suite

What suite measures.

Benchmark programs (types, how they were selected).

Why it's useful for computer engineers.

Why results might be trusted:

SPEC membership and their interests.

Rules for running benchmarks and disclosing results.
