Jet Engine Control Program in ECE

Guoxiang Gu

Department of Electrical and Computer Engineering

Louisiana State University

Abstract—The jet engine stall problem poses a challenge for the next generation of aeroengines. Feedback control becomes the technological choice for stall suppression, and performance improvement of jet engines. In this presentation we will introduce the stall problem and existing solutions, as well as opportunities for our jet engine control program in the ECE Department.

Date: Tuesday, 6 April 1999, 13:30 - 14:30

Place: Room 117 EE Building
