

Problem 1: For each section in the Eden & Mudge YAGS paper:

- (a) Provide a 30-word or less summary of the major points. Give priority to those points that are central to the conclusions of the paper.
- (b) Explain how closely the section follows the guidelines given in lecture set 2.
- (c) How might the section be improved for beginning computer researchers (including students of course)?

Problem 2: According to the paper what two weakness in existing predictors does YAGS overcome? One is mentioned early and often, the other is mentioned in one or two places.
