

EE 2720, Fall 2010

Homework # 2

Due Wednesday September 29, 2010
in class.

Enjoy ~~it~~ your homework!

Alex

Note: DO NOT do problem 5

EE 2720, Homework #2

①

Note: Please STAPLE your homework.

Problem 1: Using the two's-complement system perform the addition of the 6-bit numbers X and Y where

$$X = 011001_2 = +25_{10} \text{ and } Y = 011011_2 = +27_{10}.$$

Do you have an overflow or underflow in this case? Justify your answer.

Problem 2: Using the two's-complement system perform the addition of the 6-bit numbers ~~the~~ X and Y where

$$X = 101100_2 = -20_{10} \text{ and } Y = 110001_2 = -15_{10}.$$

Do you have an overflow or underflow in this case? Justify your answer.

Problem 3: Perform the addition $X+Y$

where X and Y are the following 6-bit signed-magnitude numbers:

$$X = 010101_2 = +21_{10} \text{ and } Y = 111111_2 = -31_{10}.$$

EE 2720, HW#2 cont.

(2)

Problem 3 cont. as the one of the example on pages 23-24 of handout#3

Problem 4: Perform the unsigned binary multiplication with multiplicand $X = 1100_2 = 12_{10}$ and multiplier $Y = 1111_2 = 15_{10}$.

Problem 5: Perform the signed two's complement binary multiplication with multiplicand $X = 1001_2 = -7_{10}$ and multiplier $Y = 1010_2 = -6_{10}$ } don't do prob. 5

Problem 6: Perform ~~XXXX~~ in BCD the addition $8+7$.

Problem 7: Perform in BCD the addition $3+4$.

EE 2720, HW#2 cont. (3)

Problem 8: Prove theorems $(T1')$, $(T2')$, $(T3)$, $(T3')$, $(T4)$, $(T5')$ found in handout #5.

Problem 9: Prove theorem $(T7)$ of handout #5 by using a truth table.

Problem 10: Prove theorem $(T10')$ of handout #5. You are not allowed to use a truth table.

Problem 11: Prove theorem $(T13')$ of handout #5 using the finite induction technique.

Problem 12: Prove the theorem that states $(X+Y) \cdot (X'+Z) = X \cdot Z + X' \cdot Y$. You are not allowed to use a truth table. Hint: Use theorem $(T11)$.

(4)

Problem 13: Prove that theorem (T10) is a special case of theorem (T11). Look at handout #5 for theorems (T10), (T11).

Problem 14: Use the theorems of switching algebra to simplify the following:

$$(a) F = W \cdot X \cdot Y \cdot Z \cdot (W \cdot X \cdot Y \cdot Z' + W \cdot X' \cdot Y \cdot Z + W' \cdot X \cdot Y \cdot Z + W \cdot X \cdot Y' \cdot Z)$$

$$(b) F = A \cdot B + A \cdot B \cdot C' \cdot D + A \cdot B \cdot D \cdot E' + A \cdot B \cdot C' \cdot E + C' \cdot D \cdot E$$
