EE 4755—Digital Design Using Hardware Description Languages

Final Exam Review

When / Where

Wednesday, 9 December 2020 (approx) to Friday evening (approx)

Conditions

Work on the exam alone.

Can use Verilog and digital logic references.

Don't seek answers to specific exam problems. E.g., don't Web-search problem text.

Format

Several problems, short-answer questions.

Resources

Lecture "slides" and code used in class: https://www.ece.lsu.edu/koppel/v/ln.html

Problem Sets

Synthesis: https://www.ece.lsu.edu/koppel/v/guides/pset-syn-seq-main.pdf

Solved tests and homework: https://www.ece.lsu.edu/koppel/v/prev.html

It is important that homework solutions be studied.

Study Recommendations

Study this semester's homework assignments and solutions. Similar problems will appear on the exam.

<u>Solve</u> Old Problems—memorizing solutions is not the same as solving.

Following and understanding solutions is not the same as solving.

Use the solutions for brief hints and to check your own solutions.

Previous Exams

Be sure to look at previous midterm and final exams, but note any differences in coverage.

Course Material Areas

Verilog

The System Verilog language, including structural and behavioral code.

Synthesis

How hardware is inferred, mapped, and optimized from Verilog.

Digital Design

- The functioning of the circuits covered in class.
- How to design digital circuits.
- How to compute cost and delay using the simple model.
- Sequential Circuit Design
- **Pipelined** Circuit Design

Tools

Understand what simulation and synthesis tools do.

Specific Circuits

Combinational and Sequential Left Shifters

Pipelined add-accumulate. (add_accum)

Understand the timing issues from 2019 Homework 6 module.

Multipliers

Understand the recursive constructions.

Verilog Topics

Objects

See https://www.ece.lsu.edu/v/2020/1020-types.v.html.

Object Kinds: variable v. net kind of objects.

Key difference:...

... variables are assigned, nets are driven (connected to something).

Data Types

Four-State Integer Types

Two-State Integer Types

Floating-Point Types

String Type

Integer Data Types

Four-State Integer Types: logic, integer, time.

Two-State Integer Types: int, bit, byte, shortint, longint.

Integer qualifiers: signed, unsigned.

Real Data Types

Real Types: real, shortreal.

Reïnterpretation: **\$realtobits**, **\$bitstoreal**, etc..

Arrays

Packed v. Unpacked Arrays

uwire [7:0] e_pluribus_unum; // Packed uwire plain_array [7:0]; // Unpacked

Element and bit numbering:

uwire [7:0] color; // Bit 0 is LSB. uwire [0:7] colour; // Bit 0 is MSB.

Static, Dynamic, and Associative arrays.

Modules

Port and parameter declaration.

Module and primitive instantiation.

Object declarations.

Continuous assign.

Procedural code.

Generate statements.

Object Kinds

var kind. (The default for logic, int, etc.)

Net kinds: uwire, wire, and other stuff we don't use in class.

Parameters

Part of module declaration: #(int w=16, int size=10).

Old-School Declaration: parameter int w=16, size=10;.

localparam.

Procedural Code

Execution of initial, always, always_comb, and always_ff.

Delays (*e.g.*, **#5**).

Event controls (*e.g.*, **@(posedge clk)**).

Blocking v. non-blocking assignment.

Elaboration and Generate Statements

https://www.ece.lsu.edu/v/2020/1025-gen-elab.v.html

Elaboration-time constants.

Describing hardware using iteration. $(E.g., ripple_w)$

Describing hardware using recursion. $(E.g., \min_t)$

Emphases, Key Skills

Verilog—Key Skills

Given a design in one form, write design in another:

Explicit Structural

Implicit Structural

Synthesizable Behavioral

Logic Diagram

Use generate statements to interconnect modules.

Synthesis Key Skills

Given Verilog code:

Show inferred hardware (before optimization).

Show expected optimizations.

Logic Design Skills

Cost and Delay Computation

https://www.ece.lsu.edu/v/2020/lsli-simple-model.pdf

Compute Cost using Simple Model

Compute Delay using Simple Model

Sequential Logic Topics

Registers

Write Verilog needed to specify a register.

Determine what registers will be inferred for some Verilog.

Timing

Show a timing diagram for sequential code.

Understand timing of examples given in class:

Counters from slides: count_thd, etc.

Multipliers: mult_linear_clk, mult_seq.

Synthesis Topics

Synthesis Topics

Understand what is done during inference, optimization, technology mapping. https://www.ece.lsu.edu/v/2020/1014-syn-general.v.html.

Inference of combinational logic.

https://www.ece.lsu.edu/v/2020/1015-syn-comb-str.v.html. https://www.ece.lsu.edu/v/2020/1045-syn-comb-behav.v.html

Inference of registers.

https://www.ece.lsu.edu/v/2020/lsli-syn-seq.pdf

Optimization of combinational logic.

Use of timing constraints in synthesis.

Digital Design Topics

Digital Design Topics

Common Components

Multiplexor

Binary Full Adder, Ripple Adder

Integer Equality and Magnitude Comparison

Common Component Skills

Show how to implement using basic gates.

Know how to optimize for special cases (a constant input, etc.).

Cost and Delay Estimation

Simple Cost Model

https://www.ece.lsu.edu/v/2020/lsli-simple-model.pdf

Cost of *n*-input AND and OR gates are (n-1) u_c.

Inverters (NOT gates) are free!

Delay of *n*-input gate is $\lceil \lg n \rceil u_t$.

Cost of a 1-bit edge-triggered register is $7 u_c \ldots$... and delay is $6 u_c$.

Critical path **does not** pass through registers.

Tools

Synthesis (Genus Synthesis).

read_hdl, elaborate

define_clock

syn_gen

syn_map

syn_opt

report area, timing
